

## CONTENTS – ANA’S PRINCIPLES OF ENVIRONMENTAL HEALTH FOR NURSING PRACTICE (2007)

**Purpose: Guiding Environmentally Safe Nursing Care**

**Introduction: Nursing and Environmental Health**

**Underlying Scientific Context: Global Climate Change and Chemical Burden**

**Underlying Assumptions: A Foundation for the Principles**

**Development of the Principles and This Document**

**Policy Statements from ANA: Safe Environmental Practices for All Nurses**

**ANA’s Principles of Environmental Health for Nursing Practice**

**Applying the Principles to Nursing Practice: Implementation Strategies**

**Nursing’s Commitment to Environmental Health: Coalitions and Partnerships**

**Summary: Environmental Health Principles In Nursing Practice**

**Glossary**

**References**

**Appendix A. CDC’s IPREPARE: Environmental Assessment for Individuals and Families**

**Appendix B. Environmental Health Organization Resources**

**Appendix C. ANA and the Precautionary Principle**

**Index**

### PRINCIPLES OF ENVIRONMENTAL HEALTH FOR NURSING PRACTICE

1. Knowledge of environmental health concepts is essential to nursing practice.
2. The Precautionary Principle guides nurses in their practice to use products and practices that do not harm human health or the environment and to take preventive action in the face of uncertainty.
3. Nurses have a right to work in an environment that is safe and healthy.
4. Healthy environments are sustained through multidisciplinary collaboration.
5. Choices of materials, products, technology, and practices in the environment that impact nursing practice are based on the best evidence available.
6. Approaches to promoting a healthy environment respect the diverse values, beliefs, cultures, and circumstances of patients and their families.
7. Nurses participate in assessing the quality of the environment in which they practice and live.
8. Nurses, other health care workers, patients, and communities have the right to know relevant and timely information about the potentially harmful products, chemicals, pollutants, and hazards to which they are exposed.
9. Nurses participate in research of best practices that promote a safe and healthy environment.
10. Nurses must be supported in advocating for and implementing environmental health principles in nursing practice.
